

PRESS RELEASE

Augsburg, 26.08.2024

PCI comes up trumps – product systems "Refurbishment, renovation and modernization" as part of the PCI annual campaign 2024

PCI system solution for the fast renovation of screeds

Augsburg, 26.08.2024 – As part of its annual campaign for refurbishment, renovation and modernization, PCI Augsburg GmbH is presenting another system solution that involves the renovation of bonded screeds and screeds on a separating or insulating layer. Whether inside or outside, as a heated screed, floating or on a separating layer – the PCI system scores with very short drying times and can be covered at an early stage.

The focus of the annual campaign "PCI comes up trumps – how winners renovate" is on various system solutions with harmonized products for refurbishment, renovation and modernization. Craftspeople benefit from reliable complete solutions that allow even demanding renovation tasks to be completed easily and reliably. The sixth main topic of the annual campaign is the fast renovation of screeds indoors and outdoors. This includes bonded screeds and screeds on a separating or insulating layer both in commercial buildings (e.g. warehouses/industrial halls, workshops) and in private residential construction.

- Wash primer: PCI Repahaft (mortar bonding agent for bonded screeds and cement mortars)

IST JETZT
TEIL VON **Sika**

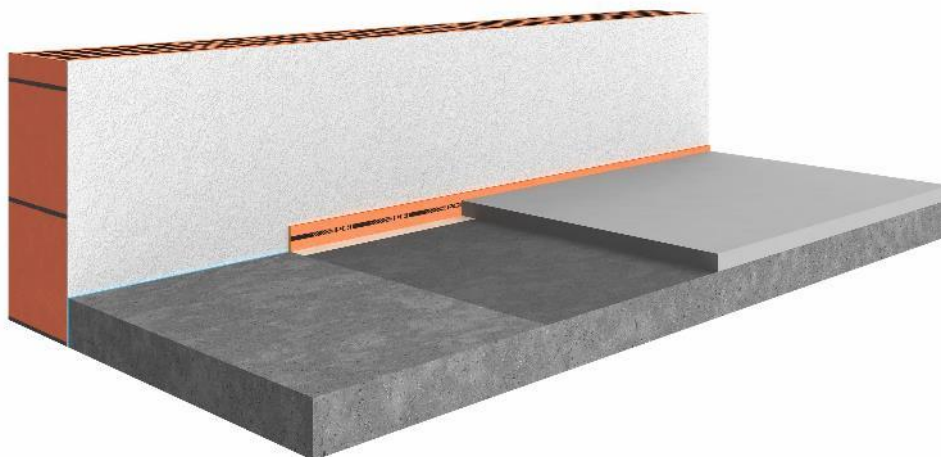

- Non-sag screed: PCI Novoment M1 plus (ready-mixed, fast-setting screed mortar for fast-curing cement screeds); alternatively on statically critical substrates: PCI Novoment Light (see below)
- Lightweight screed: PCI Novoment Light (ready-mixed, lightweight mortar for cement screeds with low dead weight)
- Flowable screed: PCI Novoment Flow (flowable screed for bonded screeds on separating and insulating layers)

■ Craftspeople benefit from the rapid construction progress and high efficiency: the renovated floor can be walked on after about six hours and can be covered with tiles after about one day. The fast-setting screeds cure with almost no shrinkage so that there is no concave arching at the edges. In addition, the easy flow and self-compacting properties reduce the amount of finishing work required.

■ Interested parties can find more detailed information on this topic on the PCI landing page [„Floor Refurbishment“](#) as well as in the PCI brochures [„Reliable Building Renovation“](#) and [„Floor Refurbishment - On a Firm Footing“](#) and [„PCI Novoment family“](#).

"When time is of the essence on the construction site, craftspeople need reliable solutions that guarantee rapid construction progress. The PCI products for screed renovation impress with their fast readiness for covering as well as fast setting and curing. "Every step, from mixing and application to the perfect result is carefully thought out and aimed at maximum efficiency for the construction site," says Fabian Ladenburger, Head of Marketing Building Materials & Tiling Trade. "The PCI system solution for screed renovation, like most of PCI's products and product systems, is also very low in emissions and thus contributes to sustainability as well as healthy building and living."
